ABOUT ME

I am an Electrical Engineering graduate from PolyU. After years of experience in the engineering field, I decided to pivot to the IT industry, driven by my passion for technology and innovation. Over the past year, I have dedicated myself to learning programming, investing countless hours in mastering languages and frameworks through online courses, projects, and hands-on practice. To demonstrate my skills, I completed a side project where I developed a web application using React, Java Spring Boot, and MySQL. Additionally, I implemented a simple search engine using Apache Lucene. This intensive learning journey has equipped me with a solid foundation in software development.
